PROFESSIONAL SUMMARY

Backend-focused full-stack engineer (Go, gRPC, C#/.NET) building production web systems since 2022. Architected a Go/gRPC payment escrow platform with Paystack signature-verified webhooks and a tamper-evident audit log, and delivered multi-currency Stripe and Paystack checkout at 1860 Travels Limited. Own systems end to end, from schema and API design to security and UI. Founder of Swift Digital Services. First-Class Physics with Electronics graduate (CGPA 4.50/5.00).

TECHNICAL SKILLS & COMPETENCIES

Backend & APIs: Go, gRPC, C# / .NET (ASP.NET Core), Node.js, REST APIs, OpenAPI/Swagger, GraphQL, Prisma ORM
Frontend: Next.js (14/15), React, TypeScript, Tailwind CSS, HTML5, CSS3, Responsive Design, Accessibility (WCAG 2.1)
Data & Infra: PostgreSQL, Redis, Supabase (Realtime, Auth), SQL, Docker, Docker Compose, Vercel, GitHub Codespaces
Architecture & Payments: Stripe, Paystack, Escrow & Dispute Workflows, Audit Logging, API design, database schema design
Security & Reliability: JWT Auth, OAuth2, Webhook Verification, CORS, Concurrency & Race-Condition Testing, Logging
Practices & Tooling: Git, GitHub Actions, CI/CD, Agile Sprints, Unit Testing (Go, .NET), Jest, Redux, Context API, Python (scripting)

TECHNICAL PROJECTS

Trade Escrow Protocol — Payment Escrow Platform **Jun 2026 – Present**
Independent project — Go, gRPC, PostgreSQL, Redis, Docker, Next.js, React, Tailwind CSS

- Architected a Go/gRPC escrow backend (Gin, pgx, PostgreSQL, Redis, JWT) on Docker Compose, with endpoints for accounts, escrows, deposits and disputes.
- Integrated Paystack deposits with signature-verified webhooks, and built a dispute/refund workflow plus a hash-chained audit log that makes tampering with transaction records detectable.
- Hardened the API with origin-allowlisted CORS, security headers and request-size limits, and removed a hardcoded secret from the OTP signing code.
- Built a Next.js/React/Tailwind frontend covering every endpoint, and wrote unit and concurrency tests that exposed and eliminated race conditions in simultaneous transactions.

IoT Weather Telemetry System — Final Year Project **Mar 2026 – Jun 2026**
Next.js, Tailwind CSS, Supabase, Python

- Built a Python pipeline and a Next.js/Tailwind dashboard on Supabase Realtime WebSockets that handled 10,000+ readings per day with about 40% lower latency than the polling version I started with. Presented at the AFIT Research Symposium (June 2026).

PROFESSIONAL EXPERIENCE

Full-Stack Web Developer | 1860 Travels Limited **January 2026 – August 2026**

- Delivered multi-currency Stripe and Paystack checkout in Node.js, automating receipts and simplifying booking payments, and fixed defects in the C#/.NET booking backend.
- Migrated 449 legacy URLs during a platform migration using C# 301 redirects, so 100% of existing booking links kept working and 404 errors were eliminated.
- Raised mobile PageSpeed by 53% (32 to 49) by reworking responsive layouts, and deployed automated metadata templates across 2,000+ pages to support organic search.
- Wrote Jest unit tests for the frontend within Agile sprints, and rewrote query logic to find and fix 556 tour packages with missing prices.
- Ran A/B tests on landing-page variants that lifted conversion by 12%.

Founder & Full-Stack Developer | Swift Digital Services **2022 – Present**

- Design, build and deploy client websites end to end (Next.js, React, Tailwind CSS, ASP.NET Core, PostgreSQL), from scoping and data modeling to production on Vercel.
- Shipped a live artist site for Chris Mitchell Jazz (chrismitchelljazz.com.ng) on a custom domain, integrating his merch storefront.
- Architect and maintain my own products, including the Go/gRPC Trade Escrow platform.

EDUCATION

Air Force Institute of Technology (AFIT) — Kaduna, Nigeria **March 2022 – June 2026**
Bachelor of Science (B.Sc. Hons) in Physics with Electronics • First-Class Honours (Final CGPA: 4.50 / 5.00) • Top 2% of the graduating technical cohort • NYSC: scheduled for 2027

VOLUNTEER EXPERIENCE

- Volunteer Tutor: tutored and mentored 50+ high-school students in physics and computing (June 2023 – September 2025).
